T-963 P.005/011 F-635

## **PATENT**

Please amend the claims as follows:

From-t 190

- 1. (Previously Presented) A remote station apparatus comprising:
- a link quality estimation unit operative to generate a link quality estimate in response to a first power control instruction received on a common channel; and
- a power control unit coupled to the link quality estimation unit, the power control unit operative to generate a second power control instruction in response to the link quality estimate, wherein the second power control instruction is used to adjust the transmit power of the common channel at a base station.
- 2. (Original) The remote station apparatus of claim 1, wherein the remote station apparatus controls transmission power in response to the first power control instruction.
- 3. (Original) The remote station apparatus of claim 1, wherein the remote station apparatus transmits the second power control instruction.
- 4. (Previously Presented) A base station apparatus comprising:
  - a decoder; and
- a determination unit coupled to the decoder, the determination operative to determine a received power control instruction for base station transmission on a common channel; and
- an adjustment unit coupled to the determination unit, the adjustment unit operative to adjust a transmission power level of the power control instruction.
- 5. (Previously Presented) A base station apparatus comprising:
- a control processor for power control of transmission of power control instructions on a common channel, wherein a transmission power level of the power control instruction is initially set to a reference value; and

an amplifier operative to adjust a power level of the power control instructions.

**PATENT** 

6. (Original) A wireless communication system comprising:

a first power control unit operative to transmit reverse link power control instructions on

a common channel; and

a second power control unit operative to adjust transmission power of the reverse link

power control instructions in response to forward link power control instructions received on a

reverse link.

7. (Previously Presented) A method for power control in a wireless apparatus operative in a

communication system having a forward link and a reverse link, the system transmitting power

control bits on a forward link common channel, the method comprising:

measuring a SNR of at least one power control bit for controlling a reverse link; and

determining a power control decision for the forward link based on the SNR, wherein the

power control decision is used to adjust the transmit power of the common channel at a base

station.

8. (Original) A method for power control in a wireless communication system, the system

having a forward link and a reverse link, the system transmitting power control instructions on a

forward link common channel, the method comprising:

determining a first power control instruction for control of the reverse link;

in response to receiving a second power control instruction on the reverse link, the second

power control instruction for control of the forward link, determining a first transmission power

level; and

transmitting the first power control instruction at the first transmission power level on the

common channel.

9. (Previously Presented) A method for power control in a wireless communication system,

the system having a forward link and a reverse link, the system transmitting power control

instructions on a forward link common channel, the method comprising:

generating a reverse link power control instruction using a predetermined value;

**PATENT** 

generating a forward link power control instruction; and adjusting a power level for transmission of the forward link power control instruction according to the reverse link power control instruction.

- 10. (Cancelled)
- 11. (Previously Presented) The base station apparatus of claim 4, wherein a transmission power level of the power control instruction is initially set to a reference value.
- 12. (New) The remote station apparatus of claim 1, wherein the link quality estimate is an SNR.
